Abstract (en)  
[origin: EP0394815A1] The reinforcing cage (13) for overground and/or underground construction possesses reinforcing clips (16) and static concrete-steel sections (20). The reinforcing sections (20) are welded, in the region of the lock, to at least one common centring and assembly section (14, 17) and, outside this region, to at least one further common centring and assembly section (15, 18) to form a reinforcing-clip group (11) with aligned reinforcing clips (16). The reinforcing-clip group (11) is connected to the static concrete-steel sections (20) at predetermined locations to form the reinforcing cage (13). <IMAGE>
