Abstract (en)
[origin: US5235305A] A coil body for electrical coils includes a solder terminal strip applied to the coil body flange which has solder eye terminals arranged in a row. One end of the solder eye terminals are in the form of solder eyes for wrapping and winding wire ends of thin wires or for holding the ends of thick wires, and the other end of the solder eye terminals are pins for emplacement into printed circuit boards. The solder eye terminals are in the form of right-angle wires injected into the solder terminal strips, whose one ends are bent U-shaped and are spaced from the solder terminal strips a sufficient distance to enable automatic winding onto the bent U-shaped end.
