Abstract (en)
[origin: EP0395040A1] The fixing between window frame and pane (2) is produced by a mechanical, resilient connection part. In the window pane (2) are provided grooved connection parts (10), whereas the frame of the window has tenon- or tongue-like fixing parts (11, 13), these being formed in one piece (11) or detachably (13). The window profile (1) can additionally have on the outside of the glass pane (2) an angled flange (5a) with a seal (1b) for holding the pane. <IMAGE>
