Abstract (en)
[origin: EP0395503A1] A device for checking the closing of a motor-vehicle flap, for example the rear boot lid, comprising a switch which controls a checking indicator (8) and two elements of which can be put into electrical contact with one another and which is actuated by the lock of the flap, this lock comprising a bolt (2) mounted on the flap or the body of the vehicle and a keeper element (4) which is mounted on the body or the flap and part of which penetrates into an indentation (2a) of the bolt (2) when the flap is closed. At least one (6 or 6a) of the elements of the switch is incorporated in the bolt (2). <IMAGE>
