Abstract (en)

[origin: EP0395512A1] Ignition coil comprising at least one magnetic assembly (M1, M2), each including a central magnetic core (4) around which are coaxially disposed two coil-frames, primary (3) and secondary (5), respectively carrying the primary (2) and secondary (6) windings, securing means able to position and fix the primary coil-frame (3) inside the secondary coil-frame (5), characterised in that the securing means consist of material ledges (57, 58) made in a tubular housing (56) of the secondary coil-frame (5) cooperating with one of the end flanges (41) of the primary coil-frame (3). <IMAGE>
