Abstract (en)
[origin: WO8903217A1] The invention relates to an application of oligonucleotidic or oligodesoxynucleotidic compounds having an anomeric configuration alpha . These compounds are used to inhibit the activity of reverse transcriptase enzymes involved in the developments of RNA viruses, more particularly to inhibit the activity of the reverse transcriptase enzyme of the human immunodeficiency virus HIV1 of AIDS.

Abstract (fr)
L'invention concerne une application des composés oligonucléotidiques ou oligodésoxynucléotidiques à configuration anomérique alpha. Ces composés sont utilisés pour l'inhibition de l'activité des enzymes réverses transcriptases impliquées dans les développements des virus à ARN, plus particulièrement, à l'inhibition de l'activité de l'enzyme réverse transcriptase du virus de l'immunodéficience humaine HIV1 du SIDA.
