Abstract (en)

[origin: EP0395787A1] The method and the apparatus serving for carrying out the method allow the combatting of domestic mites in a simple and environmentally friendly manner and without the use of chemical substances. For this purpose, a vacuum cleaner nozzle, which is known per se, interacts with a source of hot air in such a way that the site to be treated is subjected in one operation to the short-term effect of hot air with subsequent suction. The vacuum cleaner nozzle bears a hot air blower (7), through which heated air flows via a blower slot (8), located in front of the suction channel (6), onto the area to be cleaned.
