Abstract (en)
[origin: EP0395952A2] The invention relates to an ink container, for example pot, trough or the like, for pad printing machines having a block, on which an ink transport element, e.g. a roller, and a doctor blade can be moved back and forth. The ink container is surrounded by a covering element which receives the ink transport element and the doctor blade and can be moved between an operating position exposing the block and an operating position covering said block.
