Abstract (en)  
[origin: EP0395971A1] The invention relates to a spring clip compass having a spring clip (13) which is in engagement by its free ends with the rear ends of the compass limbs (1, 2) and having an adjusting device (9-12) which extends through the compass limbs, the rear ends of the compass limbs being in supporting engagement with one another. A special feature of this spring clip compass is that the spring clip consists of plastic material and its material cross-section increases from both free ends continuously to the same degree in each case. <IMAGE>
