Abstract (en)

Support structure for tables and similar office furniture, comprising a load-bearing beam, connecting together at least two support elements, above which there is supported and constrained a working plane, in which the support elements are constituted of a lower element and an upper element, capable of being connected together with engagement and constraint, embracing the load-bearing beam, the elements being equipped, the one with rod-shaped legs for resting on the ground and the other with rod-shaped arms for supporting the plane, which legs depart from a lower connecting block and are integral with it and the arms depart and are integral with an upper connecting block, the lower and upper elements being clamped to one another, with rigid constraint of the load-bearing beam, by means of a single tension member, apertures being provided in the support elements and in the working plane and leading out laterally, adapted for receiving at least one cable or the like, by insertion in a direction transverse to its length.
