Abstract (en)

An adjusting frame (12) intended for placing in an opening provided or to be provided in a wall (1) is made up of interconnected lengths of a plastic section with a substantially rectangular cross-section, the same section always being used over the periphery of the frame. The section is flat and tubular with inner reinforcement walls and is substantially of foamed plastic. The section has at the side to be placed against the reveal of the opening in the wall at least one groove for taking a sealing strip.
