Abstract (en)

The invention relates to pelleter for feed and the like, comprising an annular extrusion die which is secured to a die holder by means of tie rods, said die holder being bearing-mounted on a stationary main shaft, a driving pulley being mounted on the die holder for rotating the extrusion die. According to the invention the extrusion die is firmly drawn onto the driving pulley (9), which forms one whole with the die holder (5). On the side of the pulley (9) that is remote from the die (1), three clamping/centering units (11) are uniformly spaced along the circumference, the free end of a tie rod (7) extending outside the corresponding clamping/centering unit (11) to which unit it can be secured by means of a securing nut (23).
