Abstract (en)

[origin: EP0396473A1] The invention relates to the displaying of tidal movement. <??>Ellipse (E) is rotated so that the time interval which elapses between successive crossings of the major axis of the ellipse and of the minor axis of the ellipse through a same position corresponds to the time interval which elapses between a successive high tide and low tide. <??>The invention applies to the construction of devices of any size to display tidal movement. <IMAGE>
