Abstract (en)

[origin: EP0398196A2] What is described is a stopping device for a door with a sliding-arm door closer, the sliding arm 2 interacting with a holding unit 10 mounted in the sliding rail 3. To adjust the holding force, according to the invention the holding unit 10 has a lever 20, the effective lever arm of which is variably adjustable. The lever is designed as a leaf spring mounted on one side in a bearing block, a spring-supporting device (35) adjustable along the leaf spring being provided. <IMAGE>
