Abstract (en)

A package (11) for medical containers of flexible synthetic resin, comprising a tray part (15) formed in a rectangular shape containing four curved corners and provided along the edge of an opening thereof with a flange part (14) having an edge parallel to said shape and a lid (16) heat-sealed with said flange part (14) through the medium of an adhesive layer in such a manner as to be freely peeled, which package (11) is characterized by the fact that said four corner parts of said lid (16) are projected from the imaginary line of the outer edge (13) parallel to the shape of said flange part (14) of said tray part (15) and, at the same time, two projections (19) are formed in at least one curved part as the part (18) for starting separation of the heat-sealed part (17).
