Abstract (en)

The present invention relates to an adjustable binding sole plate for gliding sports, consisting of a plate (1) and of two slides (2) one of which is integral with the rear plate 3 and the heelpiece support 4, and the other of which is integral with the front plate 5 and with the stirrup-piece rod 6. Each plate comprises a bolt 7 which interacts with one of the slots 8 made in the plate 1 so as to be able to adapt, rapidly and without tools, the spacing of the rear heelpiece and of the front stirrup piece to the boot which has to be held. Additionally, this assembly is secured to a runner 9 by means of a screw 10 interacting with a slide 11 so that it can be positioned angularly and longitudinally on the device. The adjustable binding sole plate according to the invention is particularly intended for snow surfing. <IMAGE>
