Abstract (en)

[origin: EP0398828A1] Textile reinforcement capable of being employed for the production of various composites taking the form of a sheet in which most of the elementary filaments are arranged in the same direction. <??>In this reinforcement the holding of the said elementary filaments (1a, 1b, 1c) in place is ensured by a fibrous structure (2a, 2b, 2c) which not only intersects the abovementioned unidirectional threads in the manner of a fabric but, furthermore, comprises fibres which extend partially perpendicularly between two consecutive series of the parallel filaments (1a, 1b, 1c). <IMAGE>
