Abstract (en)
[origin: EP0399874A1] Batten assembly enabling battens to be stored in the form of an assembly intended for enabling them to be laid rapidly with the desired spacing over a receiving surface such as the rafters (11) of a roofing. <??>The continuous flexible sheet (12) is held in place by the fastening of bands (13) on the battens (10) at their intersection with the latter, so that, after the laying of the batten assembly (10) over the corresponding rafters (11), the continuous flexible sheet (12) forms, between two contiguous rafters (11), a deep central channel (15) for the flow of water. <IMAGE>
