Abstract (en)

The arm-chair comprises a backrest (1) and a seat (2) articulated (at 5) with each other and (at 13) onto the base (6) of this arm-chair whose armrests (14) are themselves articulated (at 15) onto the backrest and connected to the base by means of racks (16, 18). In the device of the invention, the geometric axis of articulation (5) of the backrest (1) on the seat (2) is disposed in front of the geometric axis of articulation (13) of the backrest (1) on the base (6) and situated, when the backrest is in the completely raised position and in the completely lowered position, respectively below and above the horizontal (P) passing through this geometric axis of articulation of the backrest on the base. <IMAGE>
