Abstract (en)
[origin: EP0399917A1] The device comprises a main reservoir (1) having a lower opening (6) in which are housed means (2) for closing off the reservoir (1) and means (3) for connecting this reservoir (1) to a water-flush pipe (4) in order to supply the reservoir (1) with water during flushing and in order to return the water from the reservoir (2) to the pipe (4) at the end of the said flushing, a lateral opening (5) which opens on the side opposite the lower opening (6) and is intended for connecting the main reservoir (1) to an auxiliary reservoir (7) containing a solution of bactericidal, surface-active and chelating agents. Use for automatically disinfecting and deodorising urinals or water-closet bowls. <IMAGE>
