Abstract (en)

The invention concerns a method and device for deep-drawing parts from precut strip material. The method is characterised in that: - a cutting device (5) is fed by means of several strips (1, 1A); - the various sections of strip (15, 15A) thus cut are brought into a waiting position (9, 9A) in order to form a buffer stock (6); - the sections of strip (15, 15A) are taken, one by one, from their waiting position in order to pass them under a deep-drawing press (8). The invention concerns the mechanical engineering industry in general. <IMAGE>
