Abstract (en)
[origin: EP0400180A1] What is described is a corner bearing for pivoting wings or pivoting and tilting wings of windows or doors, in which an angular fitting part is designed as a double-angle arrangement and comprises a wing fastening angle and a carrier angle assigned to the bearing sleeve. The wing fastening angle and carrier angle are coupled in the region of their free ends by means of pivot pins, and the mid-planes of these two angles are adjustable relative to one another by means of an adjusting device, so that the contact pressure can be regulated in a simple way.
