Abstract (en)  
[origin: EP0400186A1] The identification support has a C-shaped rigid supporting piece (1, 2) which engages under the electrical conductor (3) after fitment. The mouth opening of the supporting piece can be closed by means of an elastically articulated further arm (4) which, for its part, has a double-armed clip (5a, 5b) which can be rotated elastically, and whose one arm (5a) acts as a clamping piece on the electrical conductor (3) and hence also presses the other arm (5b) in the closed position onto the lower opening edge of the mouth. <IMAGE>
