Abstract (en)

[origin: EP0400205A1] The assembly has a suspension device 1 for the vibratory element, the suspension device 1 having a fastening region 8 for fastening the suspension device 1 to a support 10 and a mounting region for mounting the vibratory element. The fastening region is connected to the mounting region by means of a suspension element. The suspension device 1 is made of a resilient material and has a support ring 2 provided with an opening 3. Guided through the opening is a holding arm 4 which is connected at its one free end to the support ring 2 on the inner side thereof, which lies diametrically opposite the opening 3 of the support ring 2. At its other free end, which projects outwards through the opening 3 of the support ring 2, the holding arm supports the vibratory element. <IMAGE>
