Abstract (en)

A process for producing a concrete floor, which comprises pouring a concrete mixture over a prepared surface. According to the invention the concrete mixture supplied is transferred into at least one reservoir (2) of a distributing vehicle (1) and the distributing vehicle (1) is traveled over the prepared surface. The concrete mixture is then discharged from the reservoir (2) and poured, in the direction of travel, behind the reservoir (2) and distributed in a transverse direction (11). The invention also provides a distributing vehicle (1) for carrying out the process defined, said vehicle (1) being provided with a reservoir (2), a shoot communicating therewith at the back part via an opening (4) for transversely distributing the concrete mixture, and at least three wheels (5) with low pressure tyres.
