Abstract (en)
[origin: EP0401465A2] The present invention relates to a kitchen work unit (10) which is equipped with a worktop (12) which is adjustable in height. This worktop can, for example, rest on approximately L-shaped bearing profiles (25, 26) which are connected to an upper guide column (23) which, in turn, is guided on a lower guide column (24) so as to be adjustable in height. The advantage of the invention is that the worktop of the kitchen work unit can be set to a height position which is convenient for a person working at it. The height can be adjusted, for example, after releasing a release mechanism by pressure from above against a spring force or, alternatively, electrically or mechanically via a crank. <IMAGE>
