Abstract (en)
[origin: EP0401471A1] An intake air filter with a filter insert arranged in a housing is proposed. The housing has an untreated air inlet and an aperture for introduction of the filter insert, the filter insert having a sealing face, parallel to the plane of the aperture, which seals off the clean air side. This sealing face is applied to a sealing face arranged on a bearing part (10) with a sealing ring (19) inserted between them and the housing fixed to the bearing part. In order to prevent any shear movement on the sealing ring when attaching the housing (12) onto the bearing part, a slideway (16) is provided on the bearing part, in which a slide shoe (17) arranged on the housing engages. Also located on the housing is a spacer (20) which ensures that the housing can only be applied to the bearing part when the two sealing faces are in a correct attitude in relation to one another. <IMAGE>
