Abstract (en)

[origin: EP0401619A2] The invention relates to a cutting apparatus for mechanically delivered material strips, such as paper or foil strips, with an electromechanical drive, a connecting rod with cam guide and driving crank on the rotary cutter serving to drive the apparatus via a gearing with crank gear, in such a way that it is possible to achieve complete or partial cutting of the material strip, via the cam guide and the direction of rotation of the motor, by corresponding pivoting of the rotary cutter. <IMAGE>
