Abstract (en)  
[origin: EP0401655A2] In an eight cylinder printing unit, the third blanket cylinder (3) for generating a 2/1 pressure can be separated from the fourth blanket cylinder and, together with the first blanket cylinder (1), can be brought into contact with the second blanket cylinder (2). By this means, the fourth blanket cylinder (4) is not required and this printing unit, i.e. this one together with the assigned plate cylinder (40) and its inking unit, can be shut down without additional expenditure since, in contrast to the prior art, the fourth blanket cylinder is not required as a back-pressure cylinder for this type of printing. <IMAGE>
