Abstract (en)
[origin: EP0402314A1] Carrying profiles (5) are fastened by means of spacers (2) and wall anchors to a building structure (9). Sliding supports (7), attached to which is in each case a plate support (6), are inserted into the carrying profiles (5). Formed on the end faces of the facade-cladding plates (8) are grooves (8a) or holes, into which engages a T-shaped leg (6a). The carrying profiles (5) can be pre-equipped with the corresponding number of plate supports (6) and the latter can be adjusted to any desired height before being fastened definitively. <IMAGE>
