Abstract (en)

[origin: EP0402775A1] The combination of a front sole holder for a touring binding with a ski boot, in which the ski boot is held by means of a bearing arrangement (16, 17, 12, 18) so as to be swivellable about a horizontal axle extending transversely to the longitudinal direction of the ski, the bearing arrangement consisting of one bearing part assigned to the sole holder (1) and one bearing part assigned to the ski boot sole, comprises in one embodiment cylindrical centring attachments (21) on holders (8, 9) which receive an insertion axle (12) in bearings (16, 17), which insertion axle can be introduced into the bearing part of the ski boot sole constructed as transversely extending borehole (18). The centring attachments (21) are arranged concentrically around the bearings (16, 17) and engage in the state of use in bearing recesses (20) of the ski boot sole, which recesses are open towards the sole surface for the introduction of the centring attachments (21) and serve for the mutual alignment of the bearing part (16, 17, 12) of the sole holder (1) and of the bearing part (18) assigned to the ski boot sole. <IMAGE>
