Abstract (en)
[origin: EP0403025A2] A method of drilling and lining a borehole (1) comprises the steps of drilling a borehole while a drilling fluid (13) is circulated through the bores (4, 5) of a multibore drill pipe string and an over-retarded cement slurry (12) is kept substantially stationary in a pipe-formation annulus (11) surrounding said string (2), whereupon after retrieval of the drilling assembly from the borehole the cement (12) is allowed to set to an annular lining of solid cement alongside the borehole wall (1).
