Abstract (en)  
The neutral and phase circuit breaker, which comprises, inside a case, neutral and phase connection terminals, pairs of stationary and moving contacts, respective arc-cutoff chambers, a mechanism for manual control of the moving contacts, and circuit-breaking means, comprises a central structural part (1) offering an electrically-insulating partition (4) defining, on either side, a phase space and a neutral space, the said structural part being provided with means of housing and/or holding the assembly of mechanical and electrical parts of the apparatus, as well as two lateral parts (2, 3) able to be positioned and fixed on either side of the said structural part in order to delimit the said spaces and close up the internal volume of the apparatus. <IMAGE>
