Abstract (en)
[origin: EP0403417A2] The standard liq. spraying bottle uses compressed air propellant and has a chamber (2) containing compressed air propellant, pipes (8) for liquid and (9) to the nozzle (4) with valves (6) for the air and at output (5), with safety (7) (automatic), and propellant recharging. A liquid bottle (3) contains a pipe (11), connecting to the nozzle pipe (9), with a plastics plug, screwing to the chamber. Alternatively, a handle (10) carries spray and propellant spring return valves. The safety valve protects against explosion from over pressure, from improper charging or heating and may be duplicated in liquid container.
