Abstract (en)
[origin: EP0403439A1] The invention relates to an improved window in general, particularly of the enbloc type with assembly brackets, wherein the insertion of a glass pane is made easier in that it is provided only one removable glass-stop element (6) snap insertable in at least two spacers or clips (7, 8) previously mounted at least on both ends of one of the horizontal profiles (10). The said clips have grooves (17) in them for the insertion of the glass-stop element, and mutually perpendicular surfaces for supporting and guiding the glass pane. A third clip or spacer (9) is provided at the inner end of the other horizontal profile, in correspondence of the corner at the hinge side (3, 3a), whilst on the opposite side is provided at least one adjusting device (11) with a screw adjustable plate element, suitable to abut against one edge of the glass pane in order to position it properly.
