Abstract (en)
[origin: EP0403981A2] The invention relates to a framework, in particular for erecting stands at fairs, essentially consisting of supporting columns and transverse struts. A framework of this type is to be erectable simply, rapidly and inexpensively. For this purpose, the supporting columns (12) are formed from a pumped-up gastight and flexible envelope. Transverse struts (14) are articulated in each case to the upper end of the supporting columns. As a result, a stable framework consisting of pneumatically mountable elements is provided, which can be mounted in a short time with a small attendance crew and is therefore very inexpensive. <IMAGE>
