Abstract (en)

A device for unpacking products (P) arranged in rectangular holders of cuttable material such as butter or like fats arranged in cardboard boxes (P), said device comprising a frame (1), a conveyor belt (2) carried by that frame with transporting means for conveying a holder at a time past a cutting station (7, 8, 9) for cutting through a wall part of the holder, a heating station (42) for softening adhesive at points of adhesion on the holder, as well as at least two further cutting stations for arranging cuts in the standing wall parts of a lining in said holder and a removal station for removing the two parts of the lining, in order to considerably increasing the unpacking capacity, whereby the feed of products can be adapted to automatic processes for further processing the content of the holder.
