Abstract (en)
A body brush (10) is disclosed which comprises a handle part (12) and a dish-shaped body part (14) with bristles (16) thereon, the parts being flexible and removably attachable to each other, and defining a cavity (13) between them so that the body brush (10) can contain a cake of soap, a fluid or the like to be applied to the body, the body part (14) being provided with openings for allowing the contents of the brush to exit therefrom. The handle part (12) comprises transversely extending fins (22) or baffles at its normally lower end projecting into the cavity (13), so as to promote an even distribution of the contents of the body brush to the bristles. The specification also discloses accessories for the brush, a body cleaning set and a method of manufacturing the brush.
