Abstract (en)

The present invention relates to a civil drainage siphon for application to drainage holes of a wall, which comprises a siphon body (1) having an inner cavity divided into a first and a second chambers (3, 4) by a bulkhead member (2) which has, at the bottom portion thereof, a port communicating the two chambers (3, 4) with one another. There are moreover provided an inlet duct (10) and an outlet duct (11) which are respectively associated with the first and second chambers (3, 4) at the top portion of the siphon body (1).
