Abstract (en)

[origin: EP0404754A1] The invention relates to an ironing machine comprising a frame (1), an ironing roller (3) mounted rotatably around its longitudinal axis (2) on this frame (1) and an ironing bed (4) cooperating therewith which surrounds partly the roller (3) and which is movable between an ironing position and a rest position in which it is situated at a distance of the roller (3). The ironing bed (4) encloses in the ironing position substantially three quarter of the roller (3), and comprises according to the periphery of the roller (3) three successive segments (24, 25, 26) connected together by means of hinges (30, 31), which together with the segments (24, 25, 26) are movable to and from the roller (3).
