Abstract (en)

[origin: EP0405194A1] The invention relates to a process and an apparatus for electrophoretically enamelling iron and steel articles. In the process according to the invention, at least one counterelectrode is mounted in a coating container filled with enamel slip. The invention is characterised in that the workpieces (8) are conveyed through the coating container (3) by means of a chain conveyor system (9) and in that during the enamelling of a workpiece (8), the counterelectrode (7) is arranged so as to be permanently associated with the workpiece (8). <IMAGE>
