Abstract (en)

In a compact electronic appliance (1) having a display unit (21), a size of the display unit, namely a line number and a column number for a character display has been stored, and a judgment is made whether or not the inputted character position exceeds over the line number and column number while inputting display information on the display unit. An external storage medium (4), so-called "IC card stores the display information, monitors a judgment result made by the compact electronic appliance, and controls a transfer of the display information in accordance with the judgment result. Even when the sort of the compact electronic appliance is different from each other and the display size is not constant, the display information can be properly displayed.
