Abstract (en)

[origin: EP0405816A2] An electrodeless discharge tube (30, 40, 50, 60) containing an ionizable fill is provided for a discharge tube arrangement in which the discharge is generated and sustained using electromagnetic surface waves. The discharge tube comprises a first portion (32, 42, 52, 62) for insertion in a launcher. A further portion (36, 46, 54, 64) of the tube has a dissimilar cross-section from the cross-section of said first portion.
