Abstract (en)

[origin: WO9008180A1] A method for continuous hydrogenation of vegetable oil and fat providing for contacting an initial product with hydrogen in the presence of palladium catalyst in the form of particles measuring 50-350 microns with subsequent generation of a hydrogenizate, generating flow from the reaction mix which is sent for recirculation and extracting the hydrogenizate from the reaction mix circulating at a speed of 2-8 m/sec by means of an autonomous flow directed at an angle of 90-180 to the circulating flow of the reaction mix.
