Abstract (en)

[origin: EP0406501A1] Process for producing a winding of an enamelled wire on a coil body (1), in which the two ends of the enamelled wire are fixed with a connecting clip (4 to 8) enabling an electrical connection to be established with an exterior circuit by straightforward threading of a bare wire (10), the connecting clips (4 to 8) being plugged into suitable housings (3) in the coil body (1), in which each enamelled wire end is threaded into a double lateral slot (11, 12) of the connecting clip (4 to 8) plugged into a housing (3) with lateral slots of the coil body (1), and in which each free end of the wire of the winding is cut on one of the sharp edges (11, 12) of the lateral slots of the clip (4 to 8). <IMAGE>
