Abstract (en)

The present invention relates to a contact holding bush for electrical contacts in general, characterized in that it comprises a conductive bush body, made of a sheet metal element, bent on itself, so as to define an inner hollow, for housing electrical cables to be interconnected, through the bush body there being moreover formed throughgoing holes for engaging therein electrical cable locking screws. At least a portion of the bush body is sheared and bent toward the hollow, so as to operate as a parting element between the electrical cable receiving regions and has an interconnecting element for interconnecting an electrical cable protecting blade.
