Abstract (en)

[origin: EP0406552A2] The subject-matter of the invention is a cartridge album which is intended especially for stamps and comprises an album leaf ring file in a slipcase. The prior art comprises such an album, in which a ring-binding mechanism is attached to the back of a book case, whose front cover closes the ring file. The disadvantage of this mechanism arrangement is the relatively small volume capacity for album leaves with a particular thickness of the latter and particular back width. The object of the invention is therefore an enlargement of the volume capacity whilst maintaining the slipcase. This object is achieved by omitting the front cover of the book case and by connecting the mechanism rings remote from its back to the rear cover of the book case. The advantage of this solution is the approximately 50% increase in the number of album leaves which can be accommodated in the ring file. Additionally, the book back can be opened out away from the rings and used as a pulling tab. <IMAGE>
