Abstract (en)

[origin: EP0406652A1] The invention proposes a coupling device having a single-part housing (20), in which the locking bolt (21) can be rotated into different positions by an actuating slide (22) which is mounted longitudinally displaceably in the housing (20). Furthermore, the housing (20) is of integral construction and is provided with a passage opening (42), through which a correspondingly constructed cross-bar (33) of the locking bolt (21) can be pushed in an assembly position. <IMAGE>
