Abstract (en)

[origin: EP0406881A1] The invention relates to a toy (1), having elements (2, 3) which can be compiled and linked by engagement, whose special feature is to have blocks which consist of a plurality of pyramid-shaped elements (2) with a hexagonal base (4, 5) and a plurality of pyramid-shaped elements (3) with a pentagonal base (12, 13). The said blocks can be placed against one another in such a way that each element (3) with a pentagonal base (12, 13) is surrounded by elements (2) with a hexagonal base (4, 5). The side surfaces (6, 14) of the said blocks have engagement means (7, 8, 15, 16) for the mutual linking of the different blocks which can be joined together in such a way that the end points of the longer contours come to rest on a spherical surface. <IMAGE>
