Abstract (en)

A method and apparatus is provided for controlling the atmosphere above the bath of an electroslag remelting furnace (10), including sealing the atmosphere of the furnace directly above the crucible (16) by employing a shell (46) secured to the crucible (16) and a shroud (48) secured between the shell (46) and the movable furnace ram (22) to encapsulate the atmosphere, and analyzing the oxygen content of the atmosphere and controlling the amount of oxygen therein by introducing an inert gas in the atmosphere.
